Assignment 6

Question :-

The Chinook Database is about an imaginary video and music store. Each track is stored using one of the digital formats and has a genre. The store has also some playlists, where a single track can be part of several playlists. Just like TPC-H, orders are recorded for customers, but are called invoices. LINEITEM is replaced by INVOICELINE. Every customer is assigned a support employee, and Employees report to other employees.

WHERE pt.track_id = t.track_id AND t.album_id = b.album_id AND b.artist_id = a.artist_id
AND (a.name = 'AC/DC')
)
```

The screenshot shows a SQL IDE window titled "SQL 1". The query is pasted into the editor, and the results are displayed in a table below. The table has two columns: "playlist_id" and "name". There are three rows of data.
